

# **RITE** *Age Verification*

## Age Verification / ID Verification for Microsoft Retail Management System (RMS).

This tool is a must have for any retailer selling age sensitive products. RITE Age Verification ensures that your cashiers are verifying age when needed and keeps a paper trail to prove it to the local authorities if needed.

### **Commonly used in;**

Beer/wine/liquor, convenience stores, tobacco shops, adult stores, pharmacies, and anyone that sells controlled/age sensitive products.

### **The ONLY integrated solution out there**

This solution is the only pure age verification solution that is completely integrated with the POS. Everything from permissions on a per cashier basis, to tracking of when IDs were swiped and related information is accessible through RMS journals or reports.

Show us another system that can stop a cashier from making a sale if they don't swipe a valid drivers license....

### **Reduced Legal Liability – Piece of Mind**

This tool is very configurable. RITE Age Verification can be setup to assist the cashier on demand or it can be set to prompt when certain products are sold, it can even force certain users to swipe an ID and will NOT allow them to proceed without doing so, unless they have a manager's permission.

When an ID is swiped, data from the ID can be tracked within the transaction for liabilities sake. You can configure the program to store their drivers license, name, date of birth, (and any combination thereof). A simple lookup of the transaction in the RMS Journal can show you details of the verified age, putting your mind at ease.

### **Fool-proof – Easy to use**

Once RITE Age Verification is configured to your taste, it's fool-proof. Try it; you'll see that a cashier can not use it improperly. It's that simple.

### **High Tech**

The Age Verification program works with most magnetic swipe hardware and even works with newer 2 dimensional barcodes. It works in many states – and best of all, if you come across a style of US license the program does not work with, we'll add it to the application for FREE! Other hardware based solutions can require that you re-buy the equipment to achieve this.
