

# RITE *Biometrics*

Allows for **easy** and **secure** time clock punch in/out and access control for Microsoft Retail Management System (RMS)

## **Unbeatable Security**

The RITE Biometrics software takes the worry out of your system's security. You no longer have to concern yourself or your employees with passwords – employees access your RMS with a touch of their finger.

Time Clock – RITE Biometrics allows you to force cashiers to use only their fingerprint to punch in or out of your time clock system. Say goodbye to buddy punching (where one employee punches another in or out). **If this system can prevent one instance of employee buddy punching it will pay for itself.**

Access Control – users no longer need know a password to access either the Manager or the POS software – whenever they are confronted by a login screen they only need to put their finger on the finger print scanning pad.

## **Simple and Fast**

This program makes you more able to take advantage of the many security benefits Microsoft RMS has to offer. Many companies tire of forcing their users to constantly be logging in and out of the cash register or manager program – with RITE Biometrics this pain is gone! It's very simple – every time RITE Biometrics a finger is applied to the scanner it immediately logs the current user out and the new user in, automatically. It's that simple... and fast.

**RITE Biometrics is a great addition to any Microsoft RMS system. It saves you money, makes your systems more secure, and is easy to use.**
